SPRING BULBS AND ROOTS.

TUBEROSE (Bloom)

TUBEROSES.

One of the most delightfully fragrant and beautiful of the summer-flowering bulbs. By skillful management a succession of flowers may be obtained all the year round. For early flowers they can be started in February or March in the greenhouse or hotbed; and for a succession they can be planted at intervals as late as July. For flowering in the open border, plant about the middle of May, or as soon as the ground becomes warm.

CANNAS

These stately and deservedly popular plants are highly esteemed for their large and handsome foliage, brilliant flowers, and tropical appearance. Fine for a bed or group on the lawn; a place in the shrubbery border, or for banking the piazza. Cannas should not be planted out until all danger of frost is over. They can also be grown singly or in pots for decorating houses, halls, green-houses, etc. The roots should be stored in the cellar in Autumn before the foliage is touched by frost. The varieties offered by us are the most attractive and desirable and embrace new and popular varieties as well as standard sorts.
